The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 5 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 2002-109750.

Claims 5 and 6 merely read on detecting the linking position based on address and sync signal obtained from a wobbled track. The reference shows an optical disk having a ADIP track with address and sync information wherein the linking position is determined based on the sync timing as cited by the abstract.

Claims 5 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by the admitted prior art.

Claims 5 and 6 merely drawn to the use of a sync signal in a ADIP track to determine a linking position. The admitted prior art as cited on page 4 determines the linking position based in part on the sync-timing signal meeting the claimed invention.

Claims 1-4 are allowed.

None of the cited prior art shows or teaches an optical disk comprising a first detection means, a second detection means, first selecting means and a second selection means and a control means for specifying a linking position based on the selection means as shown in figs 1 and 7 elements 6, 9, 10, 11, 13/12.

Art Unit: 2627

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. 6754149 and 6266318..
